PHP PRACTICAL TEST

User Authentication & Lead Management System

Technology: Core PHP, MySQL, HTML, CSS, JavaScript **Duration:** 3 Hours **Total Marks:** 100

Student Name: _____

Date: _____ **Score:** _____ / 100

Section A: Registration System — 15 Marks

1. Create a registration form containing Name, Email, Phone Number, Gender and Profile Photo.
2. Generate a unique password automatically when the user registers.
3. Store user details in the MySQL database using PHP.
4. Store the password using secure password hashing.
5. Send a welcome email containing a login link after successful registration.

Section B: Login & OTP Verification — 20 Marks

1. Create a login form using Email and Password.
2. Verify user credentials using PHP and MySQL.
3. Implement a Two-Step Verification system using an ON/OFF setting.
4. **If ON:** After valid credentials, send a six-digit OTP to the registered email. Complete login only after correct OTP verification.
5. **If OFF:** After valid credentials, redirect the user directly to the dashboard. Do not generate or send an OTP.
6. **If credentials are incorrect:** Show an error message and do not allow login.
7. **If OTP is incorrect or expired:** Do not complete login; show an appropriate error message.
8. Implement OTP expiration and prevent reuse of a verified OTP.

Section C: User Dashboard — 10 Marks

1. Create a dashboard accessible only to logged-in users.
2. Display the logged-in user's name, email and profile photo.
3. Create an ON/OFF toggle to enable or disable Two-Step Verification.
4. Save the setting in the database. The page may reload after saving the setting.

Section D: Lead Management — 25 Marks

1. Create an **Add Lead** button that opens a separate Add Lead page or form. **AJAX is not required.**
2. Include fields: Name, Email Address, Phone Number, Father's Name, Mother's Name and Resume Upload.
3. Accept only PDF resumes with a maximum file size of 10 MB.
4. Validate form fields and uploaded files on the server.
5. Save lead details in the database.
6. Display saved leads in a dynamic HTML table.
7. After submitting a new lead, redirect back to the leads page and display the new lead at the top. A normal page reload is allowed.

Section E: CRUD Operations — 15 Marks

1. Implement an Edit Lead feature using a separate page or form.
2. Implement a Delete Lead feature with a confirmation message.
3. Allow users to view or download an uploaded resume securely.
4. Display appropriate success and error messages for each operation.

Section F: Security & Code Quality — 15 Marks

1. Use basic MySQLi queries (mysqli_query) for database operations. **Do not use prepared statements.**
2. Validate and sanitize user input appropriately.
3. Protect dashboard pages using PHP sessions.
4. Prevent unauthorized users from accessing or modifying leads.
5. Organize the project into reusable files, such as database connection, header, footer and common functions.

TEST RULES

- All code must be written by the student.
- Use Core PHP and MySQL for backend functionality.
- Do not use AJAX. Standard HTML forms, PHP form submission and page reloads are allowed.
- Database tables must be created by the student.
- Frontend design, backend logic and database operations must work together.
- Demonstrate the complete registration-to-lead-management flow.
- No marks for features that are only designed but do not function.

Passing Marks: 40/100
